Cost Per Sheet

When you clean up a spill, you must tear off at least one paper towel sheet. How much does that one sheet cost?

EXAMPLE: Suppose brand X costs 67¢ per roll. The package says there are 91 sheets in one roll. To find the cost per sheet:

\[
\text{Cost per Sheet} = \frac{\text{cost per roll}}{\text{sheets per roll}} = \frac{67\, \text{¢}}{91\, \text{sheets}} = 0.7\, \text{¢ per sheet}
\]

\[
\text{Cost per Sheet} = \frac{\text{cost per roll}}{\text{sheets per roll}} = \frac{\, \text{¢}}{\, \text{sheets}} = \, \text{¢ per sheet}
\]

\[
\text{Cost per Sheet} = \frac{\text{cost per roll}}{\text{sheets per roll}} = \frac{\, \text{¢}}{\, \text{sheets}} = \, \text{¢ per sheet}
\]

\[
\text{Cost per Sheet} = \frac{\text{cost per roll}}{\text{sheets per roll}} = \frac{\, \text{¢}}{\, \text{sheets}} = \, \text{¢ per sheet}
\]

\[
\text{Cost per Sheet} = \frac{\text{cost per roll}}{\text{sheets per roll}} = \frac{\, \text{¢}}{\, \text{sheets}} = \, \text{¢ per sheet}
\]
